

— Save parcel costs. Accelerate handling.

Ideal for small and medium-sized businesses: an online solution that lets you easily compare the rates of the leading parcel services and print the correct labels. Loading lists and manifests are also in the box.

Everything you need for smart parcel shipping.

PARCEL||XPRESS gathers information on the rates and shipping conditions of the leading parcel services together within a single online solution.

This makes it possible to finally compare the prices of DHL, UPS, TNT and the others and take the best offer. But PARCEL||XPRESS is more than a rate comparison page – it's your central system for handling all parcel shipments. Here you can print all package labels in exactly the manner stipulated by the parcel service. PARCEL||XPRESS also creates and prints the loading lists for you. Even the manifests are automatically transmitted electronically.

A special bonus: You can immediately send an e-mail to the package consignee – including the appropriate tracking number. When all is said and done, you'll achieve cost benefits for your parcel shipments, accelerate your parcel shipping processing and enhance the quality of your workflow.

Good common sense

A parcel to ship

Computer with Internet access and PARCEL||XPRESS

That's all you need:
With PARCEL||XPRESS, you build your packages online.
Affordable. Shipping. Done.

How it works: a step-by-step guide to sending parcels with PARCEL||XPRESS

CREATE SHIPPING ORDER

①

Log in to PARCEL||XPRESS with your personal login data from a computer with Internet access. Consignee information can be selected from an address book with just a few clicks or entered manually in the shipping order.

ENTER PACKAGE

②

Create new packages. Standardized packages can be saved as templates and reused.

CALCULATE PARCEL WEIGHT

③

Weigh the finished parcel and enter the calculated weight. Now all the data is recorded and you can begin the price comparison.

COMPARE PRICES

④

Now you can calculate and select the fastest or most affordable service provider. You can also automate the selection of the parcel service based on defined rules.

PRINT LABEL

⑤

Now comes the best part: Just click the *Print Label* button, and out comes just the label you need. In just the format required by the parcel service.

ADD AUTOMATICALLY TO LOADING LIST

⑥

While you affix the label to the box, PARCEL||XPRESS automatically adds it to the appropriate loading list.

COMPLETE OPEN PICKUPS

⑦

Close out the day's list when the parcel service comes by for its pickup. The data can be printed out as a loading list and sent to the parcel service as an EDI.

DONE!

DO PARCELS DEFINE YOUR WORLD?

PARCEL || XPRESS

JUST MADE IT EASIER.

Sending parcels has never been so easy for businesses with small and medium-sized volumes: PARCEL||XPRESS puts an end to the jungle of parcel service rates and the online chaos associated with sending packages. Rates become transparent. Labels are a breeze.

Online. Affordable. Shipping. Done.

The principle is simple: PARCEL||XPRESS integrates all the leading parcel services into a single Web interface, making it possible at last to compare prices and lead times. Find the fastest or most affordable service provider for your shipping needs. Once you have made your selection, all it takes is a few clicks to generate the corresponding DHL, TNT, FedEx or UPS label. You can even print the manifest document directly from PARCEL||XPRESS.

Labels. Lists. Made. Easy.

PARCEL||XPRESS is so easy to use that you can get started right away. You also have the ASSISTant on hand to support you in your work. The ASSISTant runs in the background, checking the plausibility of the data input, flagging errors or missing data and providing comments where appropriate.

Label printing – current standards are a matter of course.

Once all the data in the despatch order has been entered and is plausible, you can print the labels. All you need is a label printer or laser printer. AEB handles the tedious task of staying up to date with current label formats.

Loading lists and manifest documents are automatically generated.

PARCEL||XPRESS automatically provides you with the document that you need to give to the driver at pickup. All the packages that you enter with PARCEL||XPRESS appear on the lists of the respective carriers.

Plus more: worklist and address book.

The result is cheaper, more efficient shipping processes. Other key features of PARCEL||XPRESS deliver even more added value. Use the “plus” interface to transfer jobs directly from your job administration interface to the PARCEL||XPRESS worklist. This turns purchase orders into packages. You can also maintain an address book in the system, making it quick and easy to select your regular customers as consignees.

Templates for standard packages.

PARCEL||XPRESS also lets you define the length, width and height of frequently used packages. Then, when you enter packages, all you need to do is select the appropriate package from the list of templates.

Plus even more: individual freight rates.

PARCEL||XPRESS knows the lead times and prices of all standard services offered by the leading parcel services. Once you have implemented PARCEL||XPRESS into your workflow, it makes sense to ask your courier/express/parcel service for better conditions. Since you're producing your own labels, they should return the favor. Once you know the new rates, we will quickly and easily enter them into the system for you.

In this way, PARCEL||XPRESS saves you even more money.

Despatch notice with tracking number by e-mail.

A simple feature enables you to e-mail the package recipient that your consignment is on its way. The e-mail even contains the tracking number. PARCEL||XPRESS has this information, after all, since it printed it on the label. Since your customers are able to track their own packages, they won't need to call you—leaving you more time to focus on your business.

Customs handling, sanctions list screening, AEO application: all this and more from SERIES||XPRESS ...

A great package: the advantages of PARCEL||XPRESS at a glance

GREATER SIMPLICITY

Say goodbye to tedious “installation” and “customizing” of “IT systems”. Just go online and log in to PARCEL||XPRESS. Even system repairs and maintenance are as easy as they can be, because AEB takes all those worries away from you. For a small additional fee, AEB will even maintain your individual freight rates.

PROVEN QUALITY

PARCEL||XPRESS is the latest addition to the SERIES||XPRESS family of smart business solutions from AEB. With over 4,000 customers, SERIES||XPRESS is among the most successful business applications of all.

GENUINE USER-FRIENDLINESS

Although the SERIES||XPRESS user interface and application concept are based on the principles that have proven themselves at AEB for years, much has been revamped and redesigned in PARCEL||XPRESS. The result is software that is even more intuitive with even more clever functions and value-adding features.

LESS TIME AND EFFORT

Instead of laboriously comparing prices, see all prices at a glance. Instead of issuing transport orders online or even in writing, simply print the appropriate labels immediately. Instead of maintaining loading lists manually, simply click the mouse to generate the end-of-day list.

TRANSPARENCY AT LAST

Speaking of which: PARCEL||XPRESS brings the type of online transparency to your transport planning that is otherwise found only in pricey shipping applications: You can always see which package was sent when and with which courier/express/parcel service—and the tracking number is always at your fingertips.

ENHANCED SHIPPING QUALITY

The ASSISTant integrated into PARCEL||XPRESS checks your input to help prevent errors: Do the postal code and city match? What additional information does the courier/express/parcel service need? Which service type? AEB also automatically ensures that labels and lists are created just the way the parcel services stipulate. This ensures the possibility of a fast delivery.

ALWAYS THE BEST PRICE

Since you can finally compare the costs of the individual carriers without any extra effort, you can also take advantage of their price differences. But best of all: AEB will be happy to integrate any special conditions you have negotiated with your parcel service into PARCEL||XPRESS.

INCREASED FLEXIBILITY

The bottom line is that PARCEL||XPRESS gives you more options: Because you don't need a large initial investment. Because it doesn't tie up your IT resources. And because now you really have a choice of parcel services. You can choose your parcel service on a package-by-package basis. And always XPRESS.
