

Press Release

AEB (International) Ltd partners with BelgraviuM for radio-enabled Supply Chain Solutions

Warwick, UK, 9th July 2010 - AEB International, a leading software provider in the fields of dispatch, logistics and global trade, announced today that it has established a partnership with BelgraviuM, a manufacturer of rugged mobile communications devices. This means that AEB can now offer its customers a complete radio communications solution, based on BelgraviuM's high quality terminals, to streamline fulfilment and distribution operations in warehouses and distribution centres.

For local area network (LAN) applications the combined RF-enabled warehouse management solution provided by AEB (International) Ltd and BelgraviuM Ltd will greatly improve customer satisfaction and profitability through enhanced accuracy and efficiency in the warehouse. ASSIST4 is AEB's comprehensive solution for all logistical processes in global trade. It can manage the entire warehouse process, from goods receipt to stock putaway, from picking and stock removal to packing, from complete shipping documentation to loading.

By standardizing and automating business processes in supply chain execution, logistical processes become more reliable and efficient. This in return helps companies to cut costs and remain competitive. Adding BelgraviuM Wi-Fi based data capture to the system provides for **real-time** system automation and thus provides the ultimate optimisation of the system.

BelgraviuM's rugged hand-held and truck-mounted RF terminals present warehouse operatives with real-time instructions, such as goods-in procedures, pick assignments, put-away instructions and replenishment duties, using AEB's supply chain execution software. When these activities are completed, the RF terminals immediately provide data back to the AEB system to support real-time inventory.

Mark Brannan, General Manager for AEB (International) Ltd, said: "RF-enabled warehouse management is an essential component for many of our customers as improved accuracy and productivity in the warehouse yield huge savings and increase profitability. AEB is committed to offering the very latest in functionality and technology to enable clients to gain real competitive advantage, and as a leading provider of high-quality RF hardware, BelgraviuM is a key partner for our business going forward.

In future, the partnership will also embrace 'wide area' supply chain applications. Mark Brannan added: "Any modern supply chain management solution has to offer firms visibility and control beyond the individual warehouse and fixed location. It's important that companies are able to view all of their warehouses in a single system and to manage all logistical process outside of those warehouses. Again, BelgraviuM can provide the enabling radio technology to help facilitate wide-area data capture, in the form of GPRS enabled hardware."

Mike Turner, Group Marketing Manager for BelgraviuM, said: "BelgraviuM has a long-established track record of partnering with best-of-breed software vendors and we see AEB as a company that can provide robust and reliable supply chain solutions. Their track record is impeccable."

Notes to Editors**About Belgravium Ltd (www.belgravium.com)**

Belgravium designs, manufactures, markets and supports mobile computing systems. The company's ability to integrate its wireless technology to all types of business management system has enabled a steady growth since its foundation in 1982. During this period the product range has expanded to include; hand held mobile computers, vehicle mount terminals, full screen terminals, high speed pick by light systems, wireless LAN infrastructure, voice recognition systems and RFID tag reading hardware.

Belgravium is widely considered as a leading manufacturer within the AIDC industry and has a large and varied customer base to reinforce this. With well in excess of 500 site installations throughout Europe, Belgravium's customer base includes many household names in manufacturing, retail and distribution. Some of Belgravium's major users include Corus, Toys R Us, John West, Great Universal Stores, Coca-Cola and most of the prominent names within the Third Party Logistics sector (Wincanton, P&O, Ceva etc.). Belgravium offers full local maintenance support and rapid repair turn-around, via its own team of dedicated service engineers.
