

**AEB (International) Ltd**, a leading software provider in the areas of logistics and global trade, will focus on two key modules of its supply chain management solutions suite ASSIST4 – transport and warehouse management on its stand at IMHX.

**Stand 19 L136**

# Outbound course

**A**SSIST4 is a comprehensive solution for all logistical processes in global trade. It can manage the entire warehouse process, from goods receipt to stock putaway, from picking and stock removal to packing, from complete freight document preparation to loading.

By standardising and automating business processes in supply chain execution, logistical processes become more reliable and efficient. This in return helps companies to cut costs and remain competitive.

AEB's ASSIST4 Warehouse

Management module has just been tested and validated by the warehouse logistics team of the well-known Fraunhofer Institute, Europe's largest application-oriented research organisation – a unique seal of quality within the industry.

AEB (International) Ltd's general manager, Mark Brannan, said, "Any modern supply chain management solution has to offer large firms visibility and control beyond the individual warehouse. It's important that companies are able to view all of their warehouses in a single system and also be able to manage all logistics

processes outside of those warehouses – whether relating to the inbound or the outbound supply chain. ASSIST4 Warehouse Management does exactly that, and we look forward to demonstrating its core functionalities and unique features at IMHX 2010."

Furthermore, on Tuesday, 16th November at 2pm, AEB (International) Ltd's sales manager Gursh Atwal will give a presentation on Improving Logistics Operations via Integrated Outbound Processes, describing the typical scenarios, case studies and benefits. ●
